

SYSTEM SEVEN OUT OF OFFICE™

Getting your personal and work email while out of the office couldn't be more simple. System SEVEN Out of Office™ enables access to corporate email, calendar, contact and PIM information with widest selection of mobile devices running on Symbian, PalmOS, J2ME, Windows Mobile and Brew platforms without any software or hardware installation behind the corporate firewall or on the user's desktop. Out of Office™ utilises Outlook Web Access to mobilise email and other Outlook data.

Out of Office™ can be used with Microsoft Exchange 2000, 2003 and 2007 email servers, located either in-house or hosted elsewhere. It's the ideal solution for enterprises and SMEs as well as individual professionals, who want to quickly and cost effectively enjoy the benefits of mobile email.

ENTERPRISE BENEFITS

System SEVEN Out of Office™ enables access to email and other related data without the need to install software on a desktop or a server. It works with a vast choice of mass market phones – from Nokia, Sony Ericsson, HTC, Motorola and other providers – enabling enterprises to roll out a mobile email solution for everyone in the organisation without the need for large IT deployment. In instances where the user pays for their device, Out of Office™ allows the user to choose the service without IT manager's involvement.

Out of Office™ can be offered through the retail channel enabling operators to better penetrate the mass market with mobile email. With multi inbox functionality enabling the cross-sell between Business and Consumer users, this offers to the end-user access to both business emails and personal Internet email accounts with a single device using System SEVEN Consumer Edition.

SME BENEFITS

System SEVEN Out of Office™ is also ideal for small businesses as well as individual users who are looking for a true push email experience on an Exchange platform. As Out of Office™ is available on a wide variety of mass market devices, it provides a great flexibility for cost-sensitive small business users. With hosted Exchange, the user only needs to install software on the device, making it very quick and easy to deploy.

SIMPLE PROVISIONING

Out of Office™ comes with a simple guided activation wizard installed on the device. Activating the service is simple – just enter your Outlook Web Access server address, username and password. Pre-provisioning is also available which means that only your password is required to start the service from the device. Service activation takes typically less than five minutes.

TAKE IN

Without the need for server or desktop PC software to be installed, System SEVEN Out of Office™ is ideal for Hosted Exchange users and individual buyers in the corporate market looking for mobile access to email. System SEVEN Out of Office™ works with all accounts that are Outlook Web Access enabled which equates to over 30% of all email accounts today making it a very lucrative offer for mobile operators.
